Waste Programs Division
U S Department of Energy
P O Box 928
Golden, CO 80402-0928

RE Change to Interim Status to Store Investigative Derived Material at the 750 Pad
(RCRA Unit 25)

Dear Mr Lukow

The Hazardous Materials and Waste Management Division of the Colorado Department of Health (the Division), has reviewed the Department of Energy's (DOE) request for changes to interim status at the Rocky Flats Plant (RFP) for the 750 Pad (RCRA Unit 25) contained in your letter received November 9, 1993. The requested change is to allow for storage of investigation derived material (IDM) generated as a result of remediation activities performed on the Solar Evaporation Ponds (SEP). The Division has determined that the request qualifies for a change to interim status pursuant to 6CCR 1007-3, Section 100 20(b)(3).

Unit 25 currently has interim status to store mixed wastes in the form of pondcrete and saltcrete. DOE is requesting to store IDMs with hazardous waste codes consistent with that of the pondcrete and saltcrete. The existing 20 drums of IDM will be in the form of soil, bedrock, and drilling fluids. Hazardous waste in the form of soil, bedrock, and drilling fluids had not been previously approved for storage in Unit 25.

The Division is approving DOE's request to store 20 drums of investigative derived material. The Division is also approving storage on Unit 25 for any additional IDM, hazardous debris (such as equipment) or related wastes generated during remediation and closure activities for the SEP, provided that no additional waste codes are required and that the requested storage change will not exceed the interim status storage capacity for the unit. As stated by DOE, this change will not effect the approved interim status capacity for Unit 25, and all waste codes in the 20 drums for which approval is requested are already contained in the existing Part A.
